Event Technology Awards: AI Edition

➔ **Krueger, EventMobi, Brandt** NKIAKDBTHOE4DJ8

🏆 **Best AI for Registration & Onboarding**
For AI systems that speed up or simplify registration, check-in, and onboarding. Judges will assess improvements in queue times, user experience, and data accuracy.

COMPANY INFORMATION

Company / Organisation Name
EventMobi

Product Name (optional)
EventMobi Integration Hub

Company profile
EventMobi is event software that enables registration, check-in and badge printing, and event apps that drive engagement and networking. Teams can run complex events without juggling multiple tools.

YOUR PRODUCT

Description of your technology
Event teams run on data that is spread across registration platforms, CRMs, LMSs, and membership systems. Most still manually export CSV files, and spend hours cleaning data. Advanced integrations may allow specific fields to sync across systems. But only EventMobi's Integration (and AI Automation) Hub connects those systems (over a thousand of them!) and then allows custom AI agents to truly automate event workflows. Go beyond just synching data, to acting on it.

TECHNOLOGY DESCRIPTION

Questions / Answers

Explain how the AI works in your solution?
Uses an AI-powered automation layer to connect EventMobi with 1,000+ external platforms. Handles field mapping, AI operations, duplicate detection, and allows for custom agentic workflows.

What specific problem does this AI solve?
Event teams waste hours keeping data in sync and still end up with out-of-date records when it matters. Integration Hub fixes that, and goes further: it doesn't just sync data, it can act on it.

What makes your approach different or innovative?
Most event platforms require custom development to connect external systems. Integration Hub not only offers self-service, no-code integration with 1,000+ platforms, it enables custom agentic AI workflows for true event automation.

VALIDATION

How did you test, validate, or quality-check the AI outputs to ensure they were accurate, safe, or reliable?
Integration Hub is built on a SOC2-certified automation infrastructure with a 99.999% uptime SLA. Each integration runs with automatic error detection, retry logic of up to five attempts, and detailed sync logs giving event teams full visibility into what moved, what failed, and why. Field mapping is validated against source and destination formats before the data moves. EventMobi monitors integration health across all active connections, with alerts triggered on any anomalous behaviour.

IMPACT
In one summary, explain the overall impact of your AI solution. Please cover four areas: innovation, execution, user or customer outcomes, and measurable results.

Innovation
Connecting event tech stacks has always been limited to native integrations or can require a custom build, with weeks of lead time. Integration Hub changes that by embedding an AI-powered automation layer directly inside EventMobi. Event teams configure connections themselves in minutes using a no-code interface. The magic lies in the embedded workflow builder that can utilize ChatGPT, Claude or Gemini for AI operations on top of the data as it is being pulled from one system and written into another.

Execution
Integration Hub is built natively into EventMobi, so the experience is seamless. The catalog includes pre-built connectors for 1,000+ major platforms, CRMs, project management, and membership systems, but more can always be added. Setup follows a guided flow: connect, map fields, run a test sync, go live. Syncing runs on configured intervals, with some platforms updating every minute. The execution can be a simple data sync or a custom agentic AI workflow.

Outcome
Event teams stop managing data, automate repetitive tasks with AI automation and get back to managing events. Last-minute registrations show up in check-in lists, and a text message can go out to notify VIP arrival. The event app can create attendee profiles automatically with a custom Linkedin and ChatGPT agentic workflow. For teams running multiple events a year, integrations configured once can carry forward, removing setup work entirely.

Questions / Answers

Results
Integration Hub removes the manual work that sits between event systems. Teams that previously managed data across multiple platforms report significant reductions in pre-event reconciliation work. Connected badge scanning eliminates check-in bottlenecks. Gamification workflows tied to session data drive measurable increases in attendee participation. Event managers can turn any of their manual repetitive tasks into automated workflows powered by AI.

CASE STUDY

Describe how the AI was used in practice.
The Meeting Space used EventMobi Integration Hub at their Stockholm forum to connect across multiple systems, including a bespoke CRM and a digital badge platform. Delegate data synced automatically, and badge scans at check-in and activity sessions fed directly into EventMobi, eliminating manual tick lists. At the close of the event, EventMobi automatically messaged attendees who had not returned their sustainable badges, replacing a previously manual tracking and outreach process.

What measurable results or improvements did it deliver?
(Include any evidence that shows real-world impact.)

Badge scanning connected to EventMobi lets multiple staff check in 100+ attendees simultaneously, replacing two-person manual tick lists. Gamification driven by badge-to-session integration drove 60%+ participation in welcome evening activities, up significantly from the previous event without the real-time leaderboard. The automated badge return notification eliminated a manual end-of-event process, freeing the team at the most time-critical point of the event, reducing their post-event stress.

MODEL TRANSPARENCY (optional)

What type of AI model or technique does your solution use? Please provide a simple, high-level explanation that helps judges understand the approach (no confidential or proprietary details required).
Integration Hub is powered by an AI-driven integration platform with over 1,000 pre-built connectors. The AI layer handles intelligent field mapping, data transformation, and automated error detection using pattern recognition trained on common data structures across CRM, registration, and membership systems. No large language model is involved. The system applies rule-based and ML-driven logic to match, merge, and route data between platforms reliably, without manual configuration.

Criteria	Score
Innovation * How original and forward-thinking is the approach? Whether you built an AI solution, adopted AI within your own events operation, or are bringing an early-stage concept to market, judges want to see genuine originality. Has AI been applied in a new or distinctive way? Does it solve a real problem creatively rather than following the obvious path? Look beyond off-the-shelf deployment and assess the quality of thinking behind the approach.	/ 100
Impact * What difference has this made, or what difference is it credibly expected to make? For live solutions, look for concrete evidence -- engagement rates, time saved, revenue generated, cost reduction, satisfaction scores. For pilot or beta-stage entries, early indicators such as user testing results, pilot outcomes, letters of intent, or projected impact grounded in credible data are all valid. Strong entries will be specific, not vague.	/ 100

Recuse yourself if you have a professional or personal conflict of interest

Scoring is incomplete ⚠

Criteria	Score
Execution * How well has this been implemented or developed? For suppliers and vendors, consider the quality of the build, the robustness of delivery, and how challenges were handled. For organisers, consider how well AI was embedded into operations and how the team managed change. For early-stage entries, assess the quality of the product so far, the clarity of the roadmap, and the credibility of the team's approach. Thoughtful, professional execution at any stage counts highly.	/ 100
Results * What has been achieved, and what does the evidence show? For established solutions, consider client outcomes, retention, testimonials, and industry recognition alongside hard metrics. For organisers, attendee feedback, operational improvements, and stakeholder satisfaction all count. For startups or beta entries, judges should look for credible progress -- pilot conversions, early user feedback, investment secured, or strategic partnerships -- and should assess potential alongside proven outcomes. Do not penalise entries for being early stage; reward evidence of meaningful progress and a clear path to impact.	/ 100
