COMPANY INFORMATION

Company / Organisation Name
Gramercy Tech

Product Name (optional)
Seek - The AI Scavenger Hunt

Company profile
Gramercy Tech is an experiential technology company with a platform that covers the full event lifecycle and a team that deploys on-site, solves problems in real time, and stays until the job is done. We deliver end-to-end event technology management and a growing ecosystem of experiential engagement tools, AI-powered activations, immersive installations, and interactive digital environments, for brands, agencies, and event producers who need their events to be memorable, measurable, and technically flawless.

Think of the Gramercy Tech platform as a fully integrated experiential ecosystem: two powerful pillars, Event Management and Event Experiences, built in-house, backed by a team who has credentialed Inaugurations, Won AI Awards for Google, and built games for Spongebob. With exactly the same seriousness.

YOUR PRODUCT

Questions / Answers

Description of your technology

“Seek” turns your event floor into a game. Participants earn points by finding and photographing items from a curated list, and AI validates every submission in real time. Live leaderboards drive competition from first session to closing keynote. Custom game logic, optional fortune-teller bonus features, and Gemini-powered scoring making every game unique to the event. Each attendee has a unique experience because the images they are capturing are all different, chosen by the attendee to meet the challenge. They are able to choose the order in which they complete the tasks, choose the best image and take the photo they feel the AI will judge in a positive manner and in some cases get a different level of points depending on the image they choose to upload.

TECHNOLOGY DESCRIPTION

Explain how the AI works in your solution?

A scavenger hunt where AI does the judging, dynamic scoring, live leaderboards, and Gemini-powered validation that makes the whole event floor a playing field.

• Attendees accessed "Seek" through their event app (also provided by Gramercy Tech)
• Attendee is given a list of tasks to complete (for example, find a "sweet treat")
• Powered by Gemini, AI validates photo submissions dynamically
• Parameters are set on the back end to help the AI judge (i.e. don't accept photos of a screen, etc)
• If AI does not think you completed the task, Gemini will give you feedback on why (You did not include the correct image type, etc.)
• Once tasks are completed, attendees receive points and climbs up the leaderboard

What specific problem does this AI solve?

UPS needed a more dynamic way to engage attendees beyond passive programming. Traditional activations often struggle to sustain attention, encourage exploration, or spark meaningful interaction across large-scale events.

This AI-powered experience transformed the event into an active, game-driven environment. By dynamically updating tasks each day, it kept engagement fresh while guiding attendees to discover new areas of the space; from scanning a dinner napkin at the gala to connecting with members of the leadership team, to even finding shades of UPS brown throughout the event.

AI validation removed the need for manual oversight, enabling real-time participation at scale while ensuring fairness and consistency. In doing so, the solution didn’t just increase engagement, it fostered organic networking, movement throughout the venue, and a sense of friendly competition that extended across the entire event.

It also allowed each individual to have an unique experience. Problem solving, working alongside the AI and understanding there isn't just one "right answer" but the ability to be creative to work within the guidlines of the challenge created a personal journey for each and every attendee.

Questions / Answers

What makes your approach different or innovative?
What sets this approach apart is the use of AI as a tool to actively guide attendee behavior in real time. Rather than serving as a passive validator, AI became the tool through which engagement was shaped; be it through directing movement, encouraging interaction, or even reinforcing participation across the event.
Powered by Gemini, AI acted as a real-time judge, interpreting submissions, delivering feedback, and dynamically assigning points. This transformed the experience from a static scavenger hunt into a responsive system where each action prompted a clear, immediate reaction, rewarding desired behaviors.
The experience was further differentiated by its progressive, multi-day structure, with AI enabling new prompts to be deployed and validated seamlessly at scale. This allowed the game to evolve alongside the event, sustaining engagement and keeping interactions fresh.
By positioning AI as both guide and judge, the solution redefined its role within live experiences, not just as a backend tool, but as a central driver of behavior, engagement, and storytelling.

VALIDATION

How did you test, validate, or quality-check the AI outputs to ensure they were accurate, safe, or reliable?
We implemented a multi-layered validation approach to ensure accuracy, safety, and reliability. At the core, Gemini was guided by structured positive and negative prompts to define what constitutes a valid submission while explicitly filtering out disallowed or irrelevant content (i.e. screens, NSFW imagery).

On the backend, we established task-specific parameters and edge-case scenarios to test how the AI responded across a range of inputs. Our team conducted iterative QA testing prior to launch, submitting both valid and intentionally incorrect images to evaluate consistency, refine prompts, and reduce false positives/negatives.
We also designed the system to provide clear, real-time feedback to users when submissions were rejected, improving transparency and guiding correct behavior. Together, these measures ensured the AI operated reliably at scale while maintaining a safe and controlled experience for all attendees.

IMPACT
In one summary, explain the overall impact of your AI solution. Please cover four areas: innovation, execution, user or customer outcomes, and measurable results.

Innovation
Rather than using AI as a passive validation tool, this solution positioned it as an active participant in the experience. Powered by Gemini, AI served as the real-time judge: interpreting submissions, delivering feedback, and dynamically assigning points.
This transformed the interaction from a simple checklist into a responsive system that guided behavior, rewarded creativity, and made the AI itself part of the gameplay. By giving attendees visibility into how decisions were made, the experience demystified AI while inviting them into the process in a playful, accessible way.

Questions / Answers

Execution

The experience was designed in close collaboration with UPS, beginning with a shared definition of success around two key objectives: sustaining engagement across multiple days and increasing meaningful attendee interaction.

Through this process, we aligned on specific behaviors to encourage ongoing participation, movement throughout the event, and organic networking. To support this, the game was structured as a progressive journey, with new tasks released daily rather than all at once. This created a sense of momentum and encouraged attendees to return and re-engage throughout the event.

Tasks were intentionally mapped to key moments and locations across the program, from gala elements to leadership interactions, and included prompts designed to foster connection, such as identifying and engaging with specific attendees or leadership figures. In doing so, the entire event environment became part of the experience.

On the backend, AI parameters and prompt structures were carefully configured to maintain accuracy, consistency, and safety at scale, enabling seamless real-time participation without manual oversight.

Outcome

The result was a shift from passive attendance to active, meaningful participation. Attendees were encouraged to move through the space, discover new areas, and engage with one another in ways that felt organic rather than forced.

By embedding networking into gameplay, such as tasks requiring interaction with leadership or peers, the experience lowered social barriers and created natural moments of connection. At the same time, many of the prompts were intentionally designed to reflect elements of UPS's culture, values, and internal ecosystem.

This transformed the experience from simple engagement into something more resonant: attendees weren't just completing tasks, they were interacting with the people, symbols, and touchpoints that define the company. The result was a stronger sense of connection; not only to each other, but to the broader UPS ethos: fostering pride, recognition, and a shared sense of belonging across the event.

Results

The activation achieved meaningful internal visibility, with UPS CEO Carol Tomé participating in the experience, signaling strong alignment and engagement at the highest level of the organization.

It also delivered the highest level of engagement to date, with approximately 35% of attendees actively participating. This marked a 25% increase year over year within a company culture where gamified activations are still emerging. This level of adoption reflects both the accessibility of the experience and its ability to resonate across a broad attendee base.

Qualitative feedback further reinforced its impact, with both attendees and the event team noting that the experience felt more engaging and socially connective than previous iterations. Many participants highlighted the way it encouraged interaction, discovery, and a sense of shared experience that felt aligned with UPS's people-first culture.

CASE STUDY

Questions / Answers

Describe how the AI was used in practice.
A total of 24 AI-powered prompts (8 per day) were successfully deployed, with real-time validation and scoring functioning seamlessly at scale. This eliminated the need for manual judging while maintaining consistency and fairness across all submissions. Simply put, we used Gemini to analyze attendee submissions and judge weather or not they were successful in completing their task. If Gemini felt the submission was not correct, it would give the user feedback on why it was not awarding points.

The AI-enabled experience drove measurable increases in active participation, attendee movement, and peer-to-peer interaction across the event. By gamifying exploration and releasing tasks daily, attendees returned consistently, engaging with new prompts and areas of the space throughout the multi-day program.

The experience also generated increased visibility and interaction with key moments of the event, including leadership engagement and branded environments, as attendees were incentivized to seek out specific people, locations, and activations.

What measurable results or improvements did it deliver?
(Include any evidence that shows real-world impact.)

The AI-enabled experience drove measurable increases in active participation, attendee movement, and peer-to-peer interaction across the event. By gamifying exploration and releasing tasks daily, attendees returned consistently, engaging with new prompts and areas of the space throughout the multi-day program.

The experience also generated increased visibility and interaction with key moments of the event, including leadership engagement and branded environments, as attendees were incentivized to seek out specific people, locations, and activations.

As the first implementation of a GXP-powered activation for UPS at this event, it demonstrated a scalable, repeatable model for driving sustained engagement, transforming the event from a passive environment into an interactive, continuously evolving experience.

MODEL TRANSPARENCY (optional)

Questions / Answers

What type of AI model or technique does your solution use? Please provide a simple, high-level explanation that helps judges understand the approach (no confidential or proprietary details required).
We bridged the gap between physical participation and digital rewards by integrating Google Gemini into our event ecosystem. Using a library of proprietary prompt frameworks, we transformed the AI from a simple chatbot into a sophisticated visual judge capable of analyzing attendee photos with human-level nuance and machine-level speed.

Key Technical Capabilities
Dynamic Visual Intelligence: Our proprietary prompts allow the AI to perform granular, multi-scale analysis. It can identify specific objects, brand colors, and even ""Networking Bingo"" milestones. By utilizing high-velocity OCR (Optical Character Recognition), Gemini identifies names and geographic data printed on attendee badges, instantly verifying connections between participants from different states or industries.

AI ""Intuition"" & Spatial Reasoning: We pushed the boundaries of standard AI identification by utilizing Gemini's ability to make logical assumptions. During the event attendees submitted photos of packages. Our AI didn't just tag the package; it estimated the package volume and weight. Points were then awarded dynamically based on these estimates - for example, a large box earned 100 points creating a gamified experience that felt personalized and responsive.

Hyper-Localized Inclusion: To ensure a truly global experience, we leveraged Gemini's native fluency in dozens of languages. This allowed us to provide real-time, context-aware feedback and greetings to every attendee in their native tongue. Whether a participant was from Tokyo, Paris, or São Paulo, the AI acted as a multilingual concierge, ensuring the ""magic"" of the event was accessible to all.

The Impact
By removing the ""human-in-the-loop"" requirement for verification, we achieved:

Zero Latency: Attendees received instant gratification and leaderboard updates, sustaining high engagement levels throughout the event.

Operational Efficiency: We eliminated the need for dedicated ""scoring stations,"" allowing staff to focus on high-touch hospitality rather than administrative verification.

Global Scalability: The AI's linguistic versatility allowed us to support a diverse, international audience without the overhead of a human translation team.

Criteria	Score
Innovation * How original and forward-thinking is the approach? Whether you built an AI solution, adopted AI within your own events operation, or are bringing an early-stage concept to market, judges want to see genuine originality. Has AI been applied in a new or distinctive way? Does it solve a real problem creatively rather than following the obvious path? Look beyond off-the-shelf deployment and assess the quality of thinking behind the approach.	/ 100
Impact * What difference has this made, or what difference is it credibly expected to make? For live solutions, look for concrete evidence -- engagement rates, time saved, revenue generated, cost reduction, satisfaction scores. For pilot or beta-stage entries, early indicators such as user testing results, pilot outcomes, letters of intent, or projected impact grounded in credible data are all valid. Strong entries will be specific, not vague.	/ 100

Recuse yourself if you have a professional or personal conflict of interest

Scoring is incomplete ⚠

Criteria	Score
Execution * How well has this been implemented or developed? For suppliers and vendors, consider the quality of the build, the robustness of delivery, and how challenges were handled. For organisers, consider how well AI was embedded into operations and how the team managed change. For early-stage entries, assess the quality of the product so far, the clarity of the roadmap, and the credibility of the team's approach. Thoughtful, professional execution at any stage counts highly.	/ 100
Results * What has been achieved, and what does the evidence show? For established solutions, consider client outcomes, retention, testimonials, and industry recognition alongside hard metrics. For organisers, attendee feedback, operational improvements, and stakeholder satisfaction all count. For startups or beta entries, judges should look for credible progress -- pilot conversions, early user feedback, investment secured, or strategic partnerships -- and should assess potential alongside proven outcomes. Do not penalise entries for being early stage; reward evidence of meaningful progress and a clear path to impact.	/ 100
