COMPANY INFORMATION

Company / Organisation Name
Rozie Synopsis

Product Name (optional)

Company profile
Rozie Synopsis is an AI-native event experience platform that helps organizers turn what happens on stages and on the show floor into always-on, monetizable intelligence through two connected experiences. The event knowledge amplification experience plugs into AV systems to transform live sessions into high-accuracy transcripts, multilingual captions in 75+ languages, real-time insights, and branded post-event knowledge hubs with an AI knowledge advisor that answers questions using only verified event content. The exhibitor lead activation experience becomes an AI workspace for booths, unifying badge scans, notes, and voice into structured, CRM-synced leads with conversation summaries, buyer intent, and next steps, plus real-time ROI dashboards for exhibitors and organizers.

Unlike point tools that handle only content or only leads, Rozie Synopsis runs one unified AI stack across both domains, treating AI as core event infrastructure and proving it at scale with 50+ events, multi-year deals, and industry awards, including Best Use of AI Technology and Best Technology Startup.

YOUR PRODUCT

Questions / Answers

Description of your technology

Rozie Synopsis is an AI-native event platform that does two big jobs on one system: 1) Captures, amplifies, and monetizes session knowledge, and 2) Activates exhibitor leads from the show floor. Instead of content and booth conversations disappearing after the event, it turns them into multilingual insights, knowledge hubs, structured leads, and clear ROI dashboards.

On stages, Rozie Synopsis plugs into the AV system and listens to live sessions. Real-time speech recognition (around 95–97% accuracy in professional AV environments) turns audio into text, and large language models generate live insights, concise summaries, key takeaways, recommendations, topic clusters, visual insights, and daily trends from those transcripts. In parallel, neural machine translation supports up to 75+ languages, so attendees can see captions and short recaps in their own language on venue screens, in the event app, or on their phones. This stack effectively becomes a language and insight layer over the content program, making complex sessions easier to follow and reuse.

After the event, all sessions flow into a branded, access-controlled knowledge hub. This hub includes executive summaries, track debriefs, individual session reports, and audio highlights, so content teams start from AI-generated assets instead of a blank page. An AI knowledge advisor sits on top of this content; attendees and teams can ask natural-language questions such as “What were the main AI regulation themes?” and receive answers using only verified transcripts and reports, powered by an agentic AI framework. Organizers can also see which topics, sessions, and sponsors drive engagement and use that data to shape programming and sales strategies. Organizers also get access to the AI knowledge studio, which is pre-populated with all event data that they can use to re-purpose event knowlegde into blogs, infographics, and newsletters within minutes.

On the show floor, Rozie Synopsis becomes an AI workspace for exhibitors. Booth staff capture leads via badge or QR scans, business cards, short notes, or voice memos, and can optionally capture full conversations in voice format with consent. The AI then recaps each interaction, tags buyer intent, products discussed, objections, and next steps, and fills a structured record based on custom or pre-built templates. These records sync in real time into exhibitor CRMs and can trigger personalized follow-up emails and tasks, dramatically improving speed-to-lead and giving sales teams high-quality context for every contact.

All of this runs on one unified AI platform designed for live event conditions. Operator-first UX, self-healing behavior when connectivity drops, integrations with event apps, agenda tools, CRMs, and exhibitor portals, plus built-in sponsorship inventory around insights, hubs, and analytics make Rozie Synopsis a practical way for organizers to turn events into ongoing, AI-powered knowledge and revenue engines rather than one-time experiences.

TECHNOLOGY DESCRIPTION

Questions / Answers

Explain how the AI works in your solution?
Our AI powers two connected experiences. Event knowledge amplification on stages and exhibitor lead activation on the show floor, using one unified stack.

For event knowledge amplification, the AI connects to the AV system, captures clean audio, and uses high-accuracy speech recognition to generate real-time transcripts. Neural machine translation produces captions and short recaps in 75+ languages, while large language models create real-time insights: key quotes, top topics, summaries, takeaways, recommendations, topic clusters, and end-of-day debriefs on venue screens, in the event app, and on mobile. After the event, the same stack auto-builds a branded knowledge hub and AI knowledge advisor so attendees can access insights year-round. Event marketing teams receive acess to AI knowledge studio so they can re-purpose event knowledge year-round.

For exhibitor lead activation experience, the AI powers a workspace that combines badge/QR/business-card scans, notes, and voice-to-text (including consented conversation capture) into one structured record. Conversation-intelligence models add a summary, buyer intent, products discussed, objections, next steps, and a personalized follow-up draft, then create CRM-synced records in near real time. A speed-to-lead engine triggers follow-up emails and tasks, while dashboards show booth activity, lead volume, topics, and performance so organizers and sponsors see immediate, data-rich ROI.

What specific problem does this AI solve?
Rozie Synopsis solves one core problem. Events create huge amounts of value that currently leaks away, both from the stage and on the show floor.

On the knowledge side, events generate the best stories, insights, and thought leadership, but about 70% of that is forgotten within 24 hours, and 93% of marketers want to grow post-event engagement yet lack the infrastructure to do it. Today, this means most sessions “die on stage.” Rozie Synopsis fixes that by turning every session into live multilingual insights, clear recaps, end-of-day debriefs, and a searchable Knowledge Hub with an AI Knowledge Advisor, so content becomes a living, reusable asset, monetizable instead of a one-time moment.

On the show-floor side, proving sponsor ROI is mission-critical, but roughly 80% of leads from in-person events never get followed up. Traditional badge scans miss the actual conversation and arrive too late to matter. Rozie Synopsis solves this by automating end-to-end workflow from lead scanning to follow-up. It provides multi-modal lead capture and conversation capture with consent. AI then adds intent, objections, and next steps, and pushes CRM-ready leads out in near real time, with personalized follow-ups drafted and dashboards that show exactly what happened, where,

Questions / Answers

What makes your approach different or innovative?
Our approach is different because we treat AI as part of the event's core infrastructure and deliver work done, not just software. We unify event knowledge amplification and exhibitor lead activation on one platform, built by people who understand event ops and AV realities, so it actually works on show days.

On stages, the same stack delivers real-time insights in seconds (95–97% transcription accuracy, 80–90% translation accuracy across 75+ languages, sub-10-second latency), then auto-builds branded Knowledge Hubs and an AI Knowledge Advisor, so organizers receive finished reports, audio insights, and assets instead of raw tools they must stitch together. AV and production teams consistently report that Rozie Synopsis is among the easiest systems to run live, with self-healing behavior that rides through typical connectivity issues.

On the show floor, our multi-modal AI workspace automates the entire workflow from badge scan to personalized follow-up while providing real-time leads and analytics dashboards.

Our biggest strength is our speed. In just 1.5 years, we have shipped this full stack, real-time insight engines, multilingual NLP, automated Knowledge Hubs, agentic AI Knowledge Advisor, exhibitor workspaces, and unified ROI dashboards, and validated it with 50+ events, industry awards, and multi-year deals like with Clarion Events.

VALIDATION

Questions / Answers

How did you test, validate, or quality-check the AI outputs to ensure they were accurate, safe, or reliable?

We treat accuracy, safety, and reliability as core product requirements because Rozie Synopsis runs in live, high-stakes event environments.

1. Benchmarking the AI stack

We benchmark transcription and translation against leading enterprise systems using real conference-style audio. In professional AV environments, we consistently see 95–97% transcription accuracy and 80–90% translation accuracy across 75+ languages, with sub-10-second latency from speech to on-screen insight and 99.9% uptime across 50+ deployments.

2. Event-specific configuration and dry runs

Before each event, we configure domain guardrails like glossaries of acronyms, industry terms, speaker names, and brand language, plus standardized templates for recaps and reports. We do a dry-run with AV teams to validate audio quality, latency, and end-to-end signal flow, and adjust inputs (mics, mixer levels, filters) to minimize noise and crosstalk.

3. Guardrails, grounding, and filters

Generative outputs are grounded only in verified sources (session transcripts and structured metadata) using event-specific prompts and agentic infrastructure for the Knowledge Advisor, which reduces hallucinations and keeps answers traceable.

Post-processing filters check for offensive, off-topic, or unsafe content and trigger re-runs if needed, while foundation-model safety layers operate underneath and we avoid using personal demographic data.

4. Human-in-the-loop editorial review

Organizers can choose random-sample or full editorial review of key outputs such as executive summaries, daily debriefs, and flagship session reports. Our editorial teams validate factual accuracy, tone, structure, and brand alignment, editing or regenerating sections quickly where needed.

5. Operational monitoring and self-healing

Real-time dashboards track session status, queue health, processing times, translation jobs, engagement, and exhibitor lead flows, with alerts for anomalies.

If connectivity drops, Rozie Synopsis continues capturing raw audio and resumes processing when the network returns; self-healing behavior addresses most transient failures without human intervention.

AV and exhibitor teams consistently report that Rozie Synopsis is among the easiest tools to run on show days, which is reinforced by our ability to run hundreds of exhibitor workspaces and full content programs with no critical failures.

6. Enterprise-grade practices and external validation

We operate with SOC-II-ready security practices, configurable US/EU data residency, clear data-ownership boundaries, and opt-in consent for recorded booth conversations.

Our approach has been validated by enterprises like Google, who selected Rozie Synopsis at their flagship event.

IMPACT

In one summary, explain the overall impact of your AI solution. Please cover four areas: innovation, execution, user or customer outcomes, and measurable results.

Questions / Answers

Innovation

Our AI solution is innovative because it turns events into always-on knowledge and revenue engines, using one unified stack across both stages and show floors.

On the content side, innovation shows up as the Event Knowledge Amplification experience. Live transcription and multilingual translation convert every session into accurate, real-time text, insights, and captions in up to 75 languages that are surfaced on venue screens, in event apps, and on mobile. After each session, AI auto produces recaps, takeaways, recommendations, topic clusters, visual insights, and end-of-day debriefs, then packages everything into a branded Knowledge Hub with an AI Knowledge Advisor that answers questions using only event content. This turns what used to be forgotten talks and buried recordings into a living, searchable product that drives ongoing learning, leads, new sponsorship inventory, and next-year registrations.

On the commercial side, innovation shows up as the Exhibitor Lead Activation experience. Multi-modal capture (badge/QR scans, notes, voice, recorded conversations with consent) feeds AI that generates conversation summaries, buyer intent, objections, and next steps, then creates CRM-ready records. A speed-to-lead engine delivers these leads in near real time instead of 1–3 weeks, and ROI dashboards visualize booth activity, topics, and performance from both exhibitor and organizer point of view. This closes the loop between what was said on stage, who exhibitors spoke with, and which opportunities actually moved, turning lost conversations into measurable pipeline and stronger sponsor renewals.

Questions / Answers

Execution

Execution focuses on making powerful AI practical for AV teams, organizers, and exhibitors, not just impressive in demos. We design every step, pre-event, during event, and post-event, around real event operations so the system runs reliably at show speed.

Pre-event setup

Before each event, we ingest agendas, session metadata, and sponsor information via templates or integrations with agenda tools, event apps, and registration systems. We configure domain guardrails (glossaries of acronyms, industry terms, speaker names, brand language) and agree on report templates, Knowledge Hub access rules, and sponsor placements. For the exhibitor experience, organizers invite exhibitors, define capture templates and qualification fields, and support simple CRM connections so records can sync automatically.

Execution on stages

On site, AV teams route a clean mixed audio feed into Rozie Synopsis capture devices or laptops positioned at the AV desk. The live pipeline handles transcription, translation, and insight generation with 95–97% transcription accuracy, 80–90% translation accuracy across 75+ languages, and sub-10-second latency from speech to on-screen insight. Real-time insights (key quotes, topics) and multilingual recaps are pushed to venue screens, in-app embeds, and mobile web links, letting attendees follow along even when rooms are full or sessions overlap. After each session, the platform auto-generates structured outputs like recaps, takeaways, recommendations, topic clusters, and end-of-day debriefs, that can be lightly spot-checked. After the event Knowledge Hub with reports, audio summaries and AI knowledge advisor is auto-generated.

Execution on the show floor

For Exhibitor Lead Activation, exhibitors log into an AI workspace from phones, tablets, or laptops. After/before each booth conversation, they scan a badge/QR/business card, jot notes, or record a short voice memo (with optional full conversation recording on consent); AI converts this into a structured record with summaries, buyer intent, objections, and next steps. These records are created against event-specific templates and sync into exhibitor CRMs in near real time, with optional triggers for personalized follow-up emails and sales tasks.

Monitoring, reliability, and support

During the event, Rozie Synopsis provides live dashboards covering session status, processing queues, latency, engagement with insights, Knowledge Hub usage, booth conversations, lead volumes, and top topics. Self-healing behavior continues capturing raw audio when connectivity drops and reprocesses content when the network is restored, while health checks and alerts notify on-site or remote support if anomalies appear. AV and exhibitor teams consistently report that the system is among the easiest to run on show days, thanks to operator-first UX, clear playbooks, and brief dry runs before doors open.

Post-event execution and scaling

Post-event, all session outputs are organized into the branded Knowledge Hub with executive summaries, track debriefs, session reports, audio highlights, and the AI Knowledge Advisor. Organizers receive sponsor-ready analytics decks covering content engagement, attendee behavior, exhibitor performance, and lead flows, while exhibitors work their AI-structured pipelines in CRM. This execution model has been repeated and refined across 50+ events and hundreds of exhibitor workspaces, including complex multi-day shows like DTECH and multi-year agreements such as Clarion Events North America, demonstrating that the AI is operationally robust.

Questions / Answers

Outcome

Rozie Synopsis delivers outcomes across attendees, organizers, exhibitors, and sponsors, turning events into lasting knowledge and revenue engines.

1. Attendee outcomes

Attendees no longer have to choose between overlapping sessions or scramble to take notes. Live insights, captions, and multilingual recaps let them follow content in real time, even when rooms are full or they are in another session. Accessibility and inclusion are built in. Support for 75+ languages, readable summaries, and captioned insights makes complex content easier to consume for non-native speakers, neurodivergent attendees, and those with hearing or language barriers, without extra hardware or interpreter booths. After the event, branded Knowledge Hubs with summaries, debriefs, reports, and audio highlights give them an easy way to revisit talks, share learnings internally, and keep engaging with the event content year-round. At events using Knowledge Hubs, up to 70% of engaged users re-register for the next edition, showing that structured, AI-powered content directly supports loyalty.

2. Organizer outcomes

For organizers, Rozie Synopsis turns both content and booth activity into measurable assets, new revenue channels, and new lead sources. On the content side, they see which sessions, topics, and speakers resonate, how attendees use the Knowledge Hub, and who downloads specific reports or summaries, turning engaged content consumers into warm leads for future tickets, memberships, and sponsor deliverables. On the exhibitor side, they gain 100% visibility into sponsor and exhibitor performance. Conversations per booth, lead volumes, topics discussed, and speed-to-lead across the hall, instead of relying on “busy booth” anecdotes. This data powers stronger renewal and upsell stories and lets organizers deliver more leads and clearer ROI to sponsors. AI insights and hubs unlock new sponsorship inventory (insights sponsorships, hub branding, analytics packages), and organizers can now turn events into year-round engaged communities.

3. Exhibitor and sponsor outcomes

Exhibitors move from raw badge lists to context-rich, AI-structured leads. Every booth conversation becomes a record with summaries, buyer intent, objections, and next steps, synced into CRM in near real time and feeding automated, personalized follow-up. This improves speed-to-lead and gives sales teams concrete talking points, leading events to report up to 5x more leads for sponsors and exhibitors and roughly 30% higher conversion rates. Sponsors and exhibitors can prove ROI easily, see who is engaging with their sessions, and have enhanced lead quality.

4. Business and ecosystem outcomes

At a platform level, Rozie Synopsis has powered 50+ events, and supported hundreds of exhibitor workspaces across sectors like tech, aviation, insurance, events, healthcare and more. Events using live insights and multilingual recaps see around 30% higher onsite digital engagement, while content teams save 10+ hours per session on manual recap work. The business has secured multi-year deals such as Clarion Events North America, and won major industry recognition including Best Use of AI Technology and Best Technology Startup at the 2025 Event Technology Awards, as well as the Event Tech Live Startup Launchpad win, evidence that the outcomes are both operational and strategic, not just technical.

Questions / Answers

Results

Rozie Synopsis has delivered clear, measurable results across engagement, retention, lead generation, and revenue.

1. Scale and reliability

50+ events delivered, tens of thousands of attendees served, and hundreds of exhibitor workspaces across tech, aviation, insurance, healthcare, and more.

Benchmarks show 95–97% transcription accuracy and 80–90% translation accuracy in 75+ languages, with sub-10-second latency and 99.9% uptime across content and exhibitor workloads.

2. Engagement and retention results

Events using live insights, multilingual recaps, see around 30% higher onsite digital engagement.

Knowledge Hubs deliver far more interaction than static post-event pages and drive loyalty. Up to 70% of engaged users re-register for the next edition.

Content teams save 10+ hours per session on manual recap work, freeing time for higher-value marketing and programming tasks.

3. Lead and ROI results for organizers, exhibitors, and sponsors

Organizers using the exhibitor workspace deliver up to 5x more leads to sponsors and exhibitors compared to traditional badge-scan workflows.

Exhibitors report roughly 30% higher conversion rates when using the exhibitor lead activation experience, thanks to better context and faster speed-to-lead.

Organizers achieve 100% visibility into exhibitor performance like conversations per booth, lead volumes, topics discussed, and follow-up speed, replacing anecdotal “busy booth” feedback with concrete data.

Sponsor renewals increase by up to 25% when Rozie Synopsis dashboards and reports are used in post-event debriefs to show leads, topics, and ROI within hours of the event.

4. External validation

The platform has won major industry awards like the Best Use of AI Technology and Best Technology Startup at the 2025 Event Technology Awards, and the Event Tech Live Startup Launchpad.

Google conducted an internal review and market scan before selecting Rozie Synopsis as its event content experience platform, concluding it offered a uniquely strong, event-native solution.

Taken together, these results show that Rozie Synopsis is not just adding AI features to events; it is measurably increasing engagement, retention, qualified pipeline, sponsor renewals, and revenue for the events that deploy it.

CASE STUDY

Questions / Answers

Describe how the AI was used in practice.
At DTECH 2026, Rozie Synopsis ran as an AI layer across both the conference stages and the exhibition floor, using one stack to power Event Knowledge Amplification and Exhibitor Lead Activation.

On the content side, AV teams routed mixed audio from all key stages into Rozie Synopsis capture laptops at the AV desk. Real-time speech recognition converted this audio into transcripts, while multilingual NLP generated captions and short recaps so attendees could follow complex energy and infrastructure content in real time without taking notes. Within minutes of each session, large language models produced structured summaries, key takeaways, recommendations, topic clusters, and theme maps. These were displayed on the venue screens and also on mobile, helping attendees and the DTECH team quickly understand what themes were emerging across tracks.

The Knowledge Hub became the central content asset after the show. Every targeted session at DTECH was captured and turned into a session report with summaries and key points, while audio summaries made it easy for busy executives to “listen back” on the go. The AI Knowledge Advisor sat on top of this content and allowed users to ask questions such as “What were the main grid-modernization and reliability themes?” and receive grounded answers based only on verified session content. This shifted DTECH from a set of one-off sessions to a searchable access-controlled knowledge system that the team and partners could reuse throughout the year.

On the show floor, Rozie Synopsis acted as an AI workspace for exhibitors. Organizers rolled it out to a selected tier of exhibitors. Exhibitors onboarded before the event. Booth teams used badge scans, quick notes, and voice-to-text to capture conversations immediately after each interaction. The AI then converted every interaction into a structured record with a concise summary, buyer intent, products discussed, objections, and next steps, mapped to event-specific templates. Clean, normalized data synced directly into exhibitor portals real-time with optional automated follow-up sequences, replacing scattered notes and slow manual uploads.

Organizers used Rozie Synopsis dashboards in real time to monitor conversations per booth, topics discussed, and early engagement hotspots across the hall. This helped them support on-site sponsor conversations with data instead of anecdotes and identify which exhibitors and topics were drawing the most interest.

The same AI stack therefore captured and organized DTECH’s educational content while simultaneously illuminating demand on the show floor. Without changing how speakers presented or how exhibitors ran their booths, Rozie Synopsis quietly powered how DTECH captured knowledge, visualized demand, and proved ROI for every stakeholder.

Case study - https://www.roziesynopsis.com/how-dtech-2026-turned-every-session-and-booth-conversation-into-sponsor-roi-with-rozie-synopsis (https://www.roziesynopsis.com/how-dtech-2026-turned-every-session-and-booth-conversation-into-sponsor-roi-with-rozie-synopsis)

Questions / Answers

What measurable results or improvements did it deliver?
(Include any evidence that shows real-world impact.)

At DTECH 2026, Rozie Synopsis turned every targeted session and booth conversation into measurable engagement, leads, and sponsor ROI.

On the content side, 100% of targeted sessions were captured and transformed into structured summaries, key takeaways, recommendations, topic clusters, and reports, giving DTECH a complete, reusable library of its education program. Attendees used the branded Knowledge Hub to revisit sessions they missed, refresh what they had heard, and share insights with colleagues, extending learning and influence well beyond the show days. Content and marketing teams reported saving days of manual work on post-event recaps and internal summaries because they could start from AI-generated outputs rather than a blank page.

Engagement data showed that attendees were actively using these AI assets, not just passively watching replays. Session debriefs drove the majority of interactions, followed by live insights and replays, indicating that short, structured formats and insight-level views were especially valuable for a time-poor audience working through dense technical topics. One sponsor generated 750 incremental leads from attendees who downloaded insights, showing how AI-produced content could be used as a direct lead magnet and ROI proof points.

On the exhibitor side, Rozie Synopsis improved both the volume and quality of leads, as well as the speed of follow-up. Exhibitors received leads in near real time instead of weeks later, with each record including a concise summary of the conversation, buyer intent, products discussed, objections, and next steps, all synced straight into the exhibitor portal. This meant sales teams could prioritize and personalize outreach immediately after the show, rather than trying to reconstruct context from a list of names.

For organizers and sponsors, the AI dashboards gave a unified, data-rich view of what was happening on the floor. DTECH achieved 100% visibility into exhibitor performance, total and per-booth conversations, topics discussed, emerging hotspots, and how quickly leads were being followed up. Organizers were able to deliver roughly 5x more leads to sponsors and exhibitors compared with previous approaches and use these dashboards in renewal and upsell conversations to show exactly how each sponsor performed.

The integrated impact was that, for the first time, the same technology that captured and organized educational content also illuminated demand on the show floor. DTECH could connect what people heard in sessions with who they spoke to at booths and what themes and products were driving interest, creating a single narrative of market demand.

Operational metrics confirmed robustness. Transcription accuracy on covered stages was in the 95–97% range, exhibitor workspaces handled hundreds of conversations with no critical system failures, latency from speech to usable summary was typically under a few minutes, and latency from booth capture to CRM-ready record was under a minute. Internal analytics showed strong post-event use of the Knowledge Hub by the DTECH team and key partners, and active use of AI-structured lead data by exhibitors in their follow-up cycles, validating that the AI outputs were not just created but actually used in practice.

Scoring is incomplete ⚠ Save Cancel

Criteria	Score
Innovation * How original and forward-thinking is the approach? Whether you built an AI solution, adopted AI within your own events operation, or are bringing an early-stage concept to market, judges want to see genuine originality. Has AI been applied in a new or distinctive way? Does it solve a real problem creatively rather than following the obvious path? Look beyond off-the-shelf deployment and assess the quality of thinking behind the approach.	/ 100
Impact * What difference has this made, or what difference is it credibly expected to make? For live solutions, look for concrete evidence -- engagement rates, time saved, revenue generated, cost reduction, satisfaction scores. For pilot or beta-stage entries, early indicators such as user testing results, pilot outcomes, letters of intent, or projected impact grounded in credible data are all valid. Strong entries will be specific, not vague.	/ 100
Execution * How well has this been implemented or developed? For suppliers and vendors, consider the quality of the build, the robustness of delivery, and how challenges were handled. For organisers, consider how well AI was embedded into operations and how the team managed change. For early-stage entries, assess the quality of the product so far, the clarity of the roadmap, and the credibility of the team's approach. Thoughtful, professional execution at any stage counts highly.	/ 100

Recuse yourself if you have a professional or personal conflict of interest

Scoring is incomplete

Criteria	Score
Results * What has been achieved, and what does the evidence show? For established solutions, consider client outcomes, retention, testimonials, and industry recognition alongside hard metrics. For organisers, attendee feedback, operational improvements, and stakeholder satisfaction all count. For startups or beta entries, judges should look for credible progress -- pilot conversions, early user feedback, investment secured, or strategic partnerships -- and should assess potential alongside proven outcomes. Do not penalise entries for being early stage; reward evidence of meaningful progress and a clear path to impact.	/ 100
