COMPANY INFORMATION

Company / Organisation Name
EventMobi

Product Name (optional)
MobiAI Registration Concierge

Company profile
EventMobi is event software that enables registration, check-in and badge printing, and event apps that drive engagement and networking. Teams can run complex events without juggling multiple tools.

YOUR PRODUCT

Description of your technology
MobiAI Registration Concierge is an AI assistant built right into the conference website registration experience. It answers questions during and after registration based on the event's sessions, pricing, speakers, and logistics. It responds differently depending on who's asking, so exhibitors or speakers get different info than attendees. Questions are answered in seconds, on the same page where registration happens, helping them toward the next step.

TECHNOLOGY DESCRIPTION

Explain how the AI works in your solution?
Uses a large language model trained on each event's data: sessions, FAQs, pricing, logistics. Reads natural-language questions and returns context-specific answers by attendee type in under 3 seconds.

Questions / Answers

What specific problem does this AI solve?
Attendees, speakers, and exhibitors abandon registration when they can't find answers, costing organizers registrations and filling support inboxes with repeat questions, even after registration.

What makes your approach different or innovative?
Built into EventMobi's platform, not added on top. Trained on real event content and responsive to attendee context. The first to embed contextual AI as a website widget across the full event journey.

VALIDATION

How did you test, validate, or quality-check the AI outputs to ensure they were accurate, safe, or reliable?
Registration Concierge is in active beta across live events. EventMobi is running a structured impact study across 50+ conferences to assess accuracy, attendee experience, and conversion data. Internal testing confirmed the system accurately surfaces sessions, FAQs, and logistics in under 3 seconds. Responses are validated against organizer-approved source content in EventMobi. The AI answers only from what the organizer has configured, keeping every response accurate and on-brand.

IMPACT
In one summary, explain the overall impact of your AI solution. Please cover four areas: innovation, execution, user or customer outcomes, and measurable results.

Innovation
The registration flow has been a form, an FAQ page, and an email address since the beginning of online registration. MobiAI Registration Concierge replaces the FAQ page with something that actually talks back. It knows the difference between what a speaker needs and what a sponsor needs. It can help an attendee draft a business case for attending, with their manager’s name in it, written in their voice. The interaction becomes genuinely useful without adding any work for the event team.

Execution
Registration Concierge is native to EventMobi’s registration product. Setup uses content organizers already have in their account, with no separate tool to configure. The AI is trained from that content and deployed on the registration page as part of the existing workflow. Currently in beta, the product is being tested and refined through a 50+ conference study, with interaction rates, response accuracy, and conversion data shaping every development decision.

Outcome
Attendees get direct answers to direct questions in under 3 seconds, without leaving the page. Support teams field fewer repetitive questions. Internal research predicts that 40-60% of registration website traffic will include a concierge interaction. EventMobi projects a 10-25% reduction in bounce rate and a 30-90 second increase in time on page. That extra time is the window in which an undecided visitor becomes a registrant.

Results
In beta, Registration Concierge answers questions in under 3 seconds. EventMobi projects that more than 3 in 4 visitors will engage with the concierge, with a 10-25% anticipated reduction in bounce rate and a 10-25% increase in unique visitor conversion rate. A 50+ conference study is underway to validate these numbers across a range of event sizes and formats. Full results will be published once the beta program concludes.

CASE STUDY

Questions / Answers

Describe how the AI was used in practice.
In beta testing, a professional association conference registration site was set up representing multiple attendee types. Each received relevant answers without being redirected to a FAQ page or waiting on an email reply. One test attendee used the concierge to generate a draft justification email to their manager, personalized with their name and specific sessions. The event team didn't write it. The AI did, in seconds.

What measurable results or improvements did it deliver?
(Include any evidence that shows real-world impact.)

Attendees received accurate answers in under 3 seconds, compared to minutes of independent searching or waiting on support replies. Internal research projects a 10-25% reduction in bounce rate and a 10-25% increase in unique visitor conversion rate for registration pages using the concierge. EventMobi's 50+ conference study is collecting data to validate these projections across event types, sectors, and audience scales, with results expected after the beta program completes.

MODEL TRANSPARENCY (optional)

What type of AI model or technique does your solution use? Please provide a simple, high-level explanation that helps judges understand the approach (no confidential or proprietary details required).
MobiAI Registration Concierge is built on an LLM (currently Anthropic Claude, though easily changed) using retrieval-augmented generation (RAG). It retrieves answers from a knowledge base built from each organizer's event content rather than general training data. This grounds responses in verified, event-specific information and prevents the model from answering outside its scope. The result is an AI that behaves predictably and only answers from what the organizer has approved.

Recuse yourself if you have a professional or personal conflict of interest

Scoring is incomplete ⚠ Save Cancel

Criteria	Score
Innovation * How original and forward-thinking is the approach? Whether you built an AI solution, adopted AI within your own events operation, or are bringing an early-stage concept to market, judges want to see genuine originality. Has AI been applied in a new or distinctive way? Does it solve a real problem creatively rather than following the obvious path? Look beyond off-the-shelf deployment and assess the quality of thinking behind the approach.	/ 100
Impact * What difference has this made, or what difference is it credibly expected to make? For live solutions, look for concrete evidence -- engagement rates, time saved, revenue generated, cost reduction, satisfaction scores. For pilot or beta-stage entries, early indicators such as user testing results, pilot outcomes, letters of intent, or projected impact grounded in credible data are all valid. Strong entries will be specific, not vague.	/ 100

Recuse yourself if you have a professional or personal conflict of interest

Scoring is incomplete ⚠

Criteria	Score
Execution * How well has this been implemented or developed? For suppliers and vendors, consider the quality of the build, the robustness of delivery, and how challenges were handled. For organisers, consider how well AI was embedded into operations and how the team managed change. For early-stage entries, assess the quality of the product so far, the clarity of the roadmap, and the credibility of the team's approach. Thoughtful, professional execution at any stage counts highly.	/ 100
Results * What has been achieved, and what does the evidence show? For established solutions, consider client outcomes, retention, testimonials, and industry recognition alongside hard metrics. For organisers, attendee feedback, operational improvements, and stakeholder satisfaction all count. For startups or beta entries, judges should look for credible progress -- pilot conversions, early user feedback, investment secured, or strategic partnerships -- and should assess potential alongside proven outcomes. Do not penalise entries for being early stage; reward evidence of meaningful progress and a clear path to impact.	/ 100
